To whom it may concern.

It is my pleasure to write a recommendation letter for Mr Sanzhar Rassulov in support of his desire to continue studying. Sanzhar was one of my students in the the Data Analytics course. He passed the exam with a perfect score of 30/30.

During the course, students are asked to take part to the laboratory sessions, and to autonomously solve assigned problems. Sanzhar was always delivering the right solutions, in the allotted time. Sanzhar's final project was related to the academic performance of high school students. It consisted of an R program and a presentation. The coding was well done and the presentation well structured. I was impressed by his public speaking during the presentation of his work. His objective was to determine dropouts among students and if there was any pattern that could be identified. He also explored the effect of financial aid for students. Sanzhar demonstrated a deep understanding of the subject matter. He was able to analyse the data effectively and draw meaningful conclusions from it. In addition to his project, Sanzhar demonstrated excellent programming skills. He was able to use R Studio to extract valuable information from data. He was also proficient in writing code and had a good understanding of different data analytics algorithms such as those for supervised classification, linear regression, clustering, and association rules. Sanzhar has also a solid grasp of exploratory data analysis.

I highly recommend Sanzhar to continue studying. He is a hardworking and dedicated student who is passionate about data analytics. I am confident that he will succeed in his studies, contributing to the success of his hosting institution. Please, do not hesitate to contact me in case you need further elaboration

In faith,

Mario Rosario Guarracino, PhD
Associate Professor of Statistics
